

ASX and Media Release

Tunkillia drilling program commences

WPG Resources Ltd (ASX:WPG, WPGO) is pleased to advise that it has commenced a program of RC percussion drilling in the immediate vicinity of the Tunkillia 223 deposit.

Three high priority targets were identified during a program of calcrete sampling in late 2015 (detailed in the Company's ASX Announcement of 21 December 2015).

Drilling has now commenced on the Area 51 and Tomahawk Extended anomalies.

The drilling program, which was delayed due to wet weather, is expected to take approximately three weeks.

A third anomaly, Hatchet, will be drilled at a later stage.

These three targets, all located within close proximity to the existing Tunkillia 223 deposit, are shown in Figure 1.
